  2. University Data, including any back-ups, will not be accessed, stored, or transferred outside the United States without prior written consent from Mason. Contractor will provide access to University Data only to its employees and subcontractors who need to access the data to fulfill Contractor's obligations under the Contract. Contractor will ensure that employees who perform work under the Contract have read, understood, and received appropriate instruction as to how to comply with the data protection provisions of the Contract and to maintain the confidentiality of the University Data.
  3. The parties agree that as between them, all rights including all intellectual property rights in and to University Data shall remain the exclusive property of Mason, and Contractor has a limited, nonexclusive license to use the University Data as provided in the Contract solely for the purpose of performing its obligations under the Contract. The Contract does not give a party any rights, implied or otherwise, to the other party's data, content, or intellectual property, except as expressly stated in the Contract.
  4. Contractor will take reasonable measures, including audit trails, to protect University Data against deterioration or degradation of data quality and authenticity. Contractor shall be responsible for ensuring that University Data, per the Virginia Public Records Act, is preserved, maintained, and accessible throughout their lifecycle, including converting and migrating electronic data as often as necessary so that information is not lost due to hardware, software, or media obsolescence or deterioration.
  5. Contractor shall notify Mason within three business days if it receives a request from an individual under any applicable law regarding PII about the individual, including but not limited to a request to view, access, delete, correct, or amend the information. Contractor shall not take any action regarding such a request except as directed by Mason.
  6. If Contractor will have access to University Data that includes "education records" as defined under the Family Educational Rights and Privacy Act (FERPA), the Contractor acknowledges that for the purposes of the Contract it will be designated as a "school official" with "legitimate educational interests" in the University education records, as those terms have been defined under FERPA and its implementing regulations, and the Contractor agrees to abide by the limitations and requirements imposed on school officials. Contractor will use the education records only for the purpose of fulfilling its duties under the Contract for Mason's and its end user's benefit, and will not share such data with or disclose it to any third party except as provided for in the Contract, required by law, or authorized in writing by the University.
  7. Mason may require that Mason and Contractor complete a Data Processing Addendum ("DPA"). If a DPA is completed, Contractor agrees that the information in the DPA is accurate. Contractor will only collect or process University Data that is identified in the DPA and will only handle that data (e.g., type of processing activities, storage, security, disclosure) as described in the DPA. If Contractor intends to do anything regarding University Data that is not reflected in the DPA, Contractor must request an amendment to the DPA and may not take the intended action until the amendment is approved and documented by Mason.

PP. UNIVERSITY DATA SECURITY: Data security is of paramount concern to Mason. Contractor will utilize, store and process University Data in a secure environment in accordance with commercial best practices, including appropriate administrative, physical, and technical safeguards, to secure such data from unauthorized access, disclosure, alteration, and use. Such measures will be no less protective than those used to secure Contractor's own data of a similar type, and in no event less than reasonable in view of the type and nature of the data involved. At a minimum, Contractor shall use industry-standard and up-to-date security tools and technologies such as anti-virus protections and intrusion detection methods to protect University Data.

Immediately upon becoming aware of circumstances that could have resulted in unauthorized access to or disclosure or use of University Data, Contractor will notify Mason, fully investigate the incident, and cooperate fully with Mason's investigation of and response to and remediation of the incident. Except as otherwise required by law, Contractor will not provide notice of the incident directly to individuals who's PII was involved, regulatory agencies, or other entities, without prior written permission from Mason.

If Contractor provides goods and services that require the exchange of sensitive University Data, the Data Security Addendum attached to this Contract provides additional requirements Contractor must take to protect the University Data. Mason reserves the right to determine whether the University Data involved in this contract is sensitive, and if it so determines it will provide the Data Security Addendum to Contractor and it will be attached to and incorporated into this contract. Types of University Data that may be considered sensitive include, but is not limited to, (1) PII; (2) credit card data; (3) financial or business data which has the potential to affect the accuracy of the University's financial statements; (4) medical or health data; (5) sensitive or confidential business information; (6) trade secrets; (7) data which could create a security (including IT security) risk to Mason; and (8) confidential student or employee information.

Mason reserves the right in its sole discretion to perform audits of Contractor, at Mason's expense, to ensure compliance with all obligations regarding University Data. Contractor shall reasonably cooperate in the performance of such audits. Contractor will make available to Mason all information necessary to demonstrate compliance with its data processing obligations. Failure to adequately protect University Data or comply with the terms of this Contract with regard to University Data may be grounds to terminate this Contract.

QQ. UNIVERSITY DATA UPON TERMINATION OR EXPIRATION: Upon termination or expiration of the Contract, Contractor will ensure that all University Data are securely returned or destroyed as directed by Mason in its sole discretion within 180 days of the request being made. Transfer to Mason or a third party designated by Mason shall occur within a reasonable period of time, and without significant interruption in service. Contractor shall ensure that such transfer/migration uses facilities and methods that are compatible with the relevant systems of Mason or its transferee, and to the extent technologically feasible, that Mason will have reasonable access to University Data during the transition. In the event that Mason requests destruction of its data, Contractor agrees to destroy all data in its possession and in the possession of any subcontractors or agents to which the Contractor might have transferred University Data. Contractor agrees to provide documentation of data destruction to the University.

Contractor will notify the University of any impending cessation of its business and any contingency plans. This includes immediate transfer of any previously escrowed assets and University Data and providing Mason access to Contractor's facilities to remove and destroy Mason-owned assets and University Data. Contractor shall implement its exit plan and take all necessary actions to ensure a smooth transition of service with minimal disruption to Mason. Contractor will also provide a full inventory and configuration of servers, routers, other hardware, and software involved in service delivery along with supporting documentation, indicating which if any of these are owned by or dedicated to Mason. Contractor will work closely with its successor to ensure a successful transition to the new equipment, with minimal downtime and effect on Mason, all such work to be coordinated and performed in advance of the formal, final transition date.

RR. UNIVERSITY REVIEW/APPROVAL: All goods, services, products, design, etc. produced by the Contractor for or on behalf of Mason are subject to Mason's review and approval.

SS. WAIVER: The failure of a party to enforce any provision in this Contract shall not be deemed to be a waiver of such right.

- b. Additionally, the Selected Firm/Vendor will provide the University upon request the results of the above audits, scans and tests, and will promptly modify its security measures as needed based on those results in order to meet its obligations under the Contract. The University may require, at University expense, the Selected Firm/Vendor to perform additional audits and tests, the results of which will be provided promptly to the University.

1. Contractor will use University Data only for the purpose of fulfilling its duties under the Contract and will not share such data with or disclose it to any third party without the prior written consent of Mason, except as required by the Contract or as otherwise required by law. University Data will only be processed by Contractor to the extent necessary to fulfill its responsibilities under the Contract or as otherwise directed by Mason.
2. University Data, including any back-ups, will not be accessed, stored, or transferred outside the United States without prior written consent from Mason. Contractor will provide access to University Data only to its employees and subcontractors who need to access the data to fulfill Contractor's obligations under the Contract. 3. The parties agree that as between them, all rights including all intellectual property rights in and to University Data shall remain the exclusive property of Mason, and Contractor has a limited, nonexclusive license to use the University Data as provided in the Contract solely for the purpose of performing its obligations under the Contract. Contractor shall be responsible for ensuring that University Data, per the Virginia Public Records Act, is preserved, maintained, and accessible throughout their lifecycle, including converting and migrating electronic data as often as necessary so that information is not lost due to hardware, software, or media obsolescence or deterioration.
5. Contractor shall notify Mason within three business days if it receives a request from an individual under any applicable law regarding PII about the individual, including but not limited to a request to view, access, delete, correct, or amend the information. Contractor shall not take any action regarding such a request except as directed by Mason.

If Contractor intends to do anything regarding University Data that is not reflected in the DPA, Contractor must request an amendment to the DPA and may not take the intended action until the amendment is approved and documented by Mason.

PP. UNIVERSITY DATA SECURITY: Data security is of paramount concern to Mason. Contractor will utilize, store and process University Data in a secure environment in accordance with commercial best practices, including appropriate administrative, physical, and technical safeguards, to secure such data from unauthorized access, disclosure, alteration, and use. Such measures will be no less protective than those used to secure Contractor's own data of a similar type, and in no event less than reasonable in view of the type and nature of

the data involved. At a minimum, Contractor shall use industry-standard and up-to-date security tools and technologies such as anti-virus protections and intrusion detection methods to protect University Data.

1. Immediately upon becoming aware of circumstances that could have resulted in unauthorized access to or disclosure or use of University Data, Contractor will notify Mason, fully investigate the incident, and cooperate fully with Mason's investigation of and response to and remediation of the incident. Except as otherwise required by law, Contractor will not provide notice of the incident directly to individuals who's PII was involved, regulatory agencies, or other entities, without prior written permission from Mason.
2. If Contractor provides goods and services that require the exchange of sensitive University Data, the Data Security Addendum attached to this Contract provides additional requirements Contractor must take to protect the University Data. Mason reserves the right to determine whether the University Data involved in this Contract is sensitive, and if it so determines it will provide the Data Security Addendum to Contractor and it will be attached to and incorporated into this contract. Types of University Data that may be considered sensitive include, but is not limited to, (1) PII; (2) credit card data; (3) financial or business data which has the potential to affect the accuracy of the University's financial statements; (4) medical or health data; (5) sensitive or confidential business information; (6) trade secrets; (7) data which could create a security (including IT security) risk to Mason; and (8) confidential student or employee information.
3. Mason reserves the right in its sole discretion to perform audits of Contractor, at Mason's expense, to ensure compliance with all obligations regarding University Data. Contractor shall reasonably cooperate in the performance of such audits. Contractor will make available to Mason all information necessary to demonstrate compliance with its data processing obligations. Failure to adequately protect University Data or comply with the terms of this Contract with regard to University Data may be grounds to terminate this Contract.

QQ. UNIVERSITY DATA UPON TERMINATION OR EXPIRATION: Upon termination or expiration of the Contract, Contractor will ensure that all University Data are securely returned or destroyed as directed by Mason in its sole discretion within 180 days of the request being made. Transfer to Mason or a third party designated by Mason shall occur within a reasonable period of time, and without significant interruption in service. Contractor shall ensure that such transfer/migration uses facilities and methods that are compatible with the relevant systems of Mason or its transferee, and to the extent technologically feasible, that Mason will have reasonable access to University Data during the transition. In the event that Mason requests destruction of its data, Contractor agrees to destroy all data in its possession and in the possession of any subcontractors or agents to which the Contractor might have transferred University Data. Contractor agrees to provide documentation of data destruction to the University.

Contractor will notify the University of any impending cessation of its business and any contingency plans. This includes immediate transfer of any previously escrowed assets and University Data and providing Mason access to Contractor's facilities to remove and destroy Mason-owned assets and University Data. Contractor shall implement its exit plan and take all necessary actions to ensure a smooth transition of service with minimal disruption to Mason. Contractor will also provide a full inventory and configuration of servers, routers, other hardware, and software involved in service delivery along with supporting documentation, indicating which if any of these are owned by or dedicated to Mason. Contractor will work closely with its successor to ensure a successful transition to the new equipment, with minimal downtime and effect on Mason, all such work to be coordinated and performed in advance of the formal, final transition date.

RR. UNIVERSITY REVIEW/APPROVAL: All goods, services, products, design, etc. produced by the Contractor for or on behalf of Mason are subject to Mason's review and approval.

SS. WAIVER: The failure of a party to enforce any provision in this Contract shall not be deemed to be a waiver of such right.

We believe in taking accountability for our work and recommendations, and approach strategic objectives with an "operator's" orientation. We understand time pressures and the urgency to get initiatives off the ground and show momentum and results. We know what it takes to execute recommendations — we are helping several

our clients execute recommendations we co-developed. Recommendations are only as good as their execution, and we take pride in developing recommendations and plans that are not only actionable, but also sustainable in the long-term. We are confident that, thanks to this hands-on implementation experience, we can avoid blind alleys and options that may prove unsustainable. Our aim is to get to the answer that is right for GMU more quickly. We know what design issues to focus on during the planning process and which potential solutions may be a better fit for a particular organization or initiative.

## **George Mason University**

Mike Laskofski

Associate Vice President, Research Services

Engagement Leader: Tomas Pereira

### **Issue**

George Mason University's incredible research growth over the last five years exposed the fact that the current operating model was not sustainable. In fiscal year 2019, GMU had over \$100M in total research funding. This represented an almost 50% increase over the previous five years. Students, faculty, and staff pursuing research across schools and departments, in research centers and institutes based on campus, and through interdisciplinary programs, partnerships, and affiliations were challenged in negotiating the complex and inconsistent research administration structure, as the variability between and among the colleges was significant. Given the growth of the University's research enterprise, redundancies and inefficient processes have developed across the institution. GMU leadership suggested that a review of the current state was appropriate. From this initial review, it was recommended that GMU develop a distributed model for Research Administration.

The team was engaged to assist in developing the new operating model, designing a plan to pilot the service centers, and creating an implementation plan to support the campus-wide rollout to the colleges. Our services included change management and financial impact components.

- Distributed Model Development – Define service roles and responsibilities; determine staff roles, skills needed, and job descriptions; develop operating procedures; and develop performance agreements (between service centers and faculty/departments, and between service centers and central offices)
- Pilot Plan Development – Develop pilot roll-out, evaluate pilot success, and revise the service center model accordingly
- Campus-wide Implementation Plan Development – Develop tactical rollout plan, including staff changes and logistics
- Change Management – Vision and leadership alignment, stakeholder engagement, and communication; culture and organizational alignment; training; and adoption and promotion of ongoing success

### **Value to client**

The new model has been designed (including roles and responsibilities, staffing and logistics, performance level agreements, job descriptions and training development), and the colleges are in the process implementation. To support the new model, the team developed service level agreements, designed the campus-wide rollout plan, and measured the success of the initial pilots. This project was delivered on time and on budget.

Meghan St. George  
Chief Business Officer, College of Science  
George Mason University  
mstgeorg@gmu.edu

Engagement Leader: Tomas Pereira

**Issue**

The College of Science (COS) at George Mason University is the largest college in size in terms of research volumes. Even though the college is well established, there had been many years of growth without the benefit of a proper organizational review or assessment. Over time COS found itself operating in a manner that was not sustainable nor would further growth be supported. Triggered by the changes to the research administration environment at GMU, College leadership decided to review their operations to better understand their growth potential.

**Solution**

We assisted COS in an assessment of their research and administration functions across all departments and centers to better understand if there was a better possible model. The approach that we took in this review was to couple empirical data with multitiered conversations with faculty, staff, and other college leadership. The findings included:

- Shared Service Center Model Development– Define service center roles and responsibilities; determine staff roles, skills needed, and job descriptions; and develop performance agreements (between service centers and faculty/departments, and between service centers and central offices)
- Pilot Plan Development – Develop pilot roll-out, evaluate pilot success, and revise the service center model accordingly
- Develop tactical rollout plan, including staff changes and logistics
- Change Management – Vision and leadership alignment, stakeholder engagement, and communication; culture and organizational alignment; training; and adoption and promotion of ongoing success

**Value to client**

The proposed model has been designed (including roles and responsibilities, staffing and logistics, performance level agreements, job descriptions and training development), and the college-wide implementation is being executed on. To support the new plan, the team developed service level agreements, a sustainable governance model, designed the college-wide rollout plan that will measure the success of the changes. This project was delivered on time and on budget.

Chief Information Officer and VP Research, Nicklaus Children's Hospital

[david.seo@me.com](mailto:david.seo@me.com)

Engagement Leader: Tomas Pereira

### **Issue**

The University of Miami (UM) is one of the nation's leading research universities. UM received \$305.1 million in total research funding awards. Despite being a mature research enterprise, Miller School of Medicine (MSOM) functioned in a non-optimized manner. There were issues around governance and oversight. Additionally, there was a misalignment of resources to expected outcome in the context of falling hospital revenue. The university and MSOM understood that it needed to focus its resources, both financial and human capital, in the execution and expansion of their research plans.

### **Solution**

The team was brought in to assess the operations and financial alignment of all research operations within MSOM. This review considered basic to translational research, from all areas within the medical school, and the areas in which the medical school connected over to the main university campus. During this review, many issues were identified, and solutions were provided, along with the business case supporting the changes. The areas reviewed and changes suggested included:

- The governance structure that oversees, defines, and executes on research vectors within the MSOM
- MSOM central grant offices and their operational design
- A full review of department/division functional resources committed to research administration, including staffing levels, roles, and responsibilities
- Standard Operating Procedures (SOPs) for research administration shared services
- Service Level Agreements between research administration shared service centers and the departments and faculty they serve
- Operational reporting metrics for research administration shared service center
- Training expectations for faculty and staff, and accountabilities (e.g., Department Chair/Administrator)
- An operational and financial assessment of our core and shared resources managed by the MSOM. These include: The vivarium, multiple imaging cores, microscopy cores, cell manufacturing facilities, and other important clinical research cores
- Other research-related administration functions such as conflict of interest, bridge funding, and matching funds processes and reporting requirements
- Tactical steps for implementation of shared service center
- Change management and communication activities

### **Value to client**

MSOM was able to realize significant operational improvements that were tied to their future state strategic goals. Among these include, connecting research vectors to research operations, strengthening clinical research operations within the Cancer Center, and creating an environment where multi-PI or team grants had a higher percentage of success at funding agencies.

### **Issue**

Emory is one of the nation's preeminent universities. In fiscal year 2010, Emory received \$535.1 million in total research funding awards, a 10.5 percent increase over the previous year. Students, faculty, and staff are pursuing research across schools and departments, in research centers and institutes based on campus, and through interdisciplinary programs, partnerships, and affiliations. This enterprising network is supported by administrative offices that manage related issues such as safety, compliance, technology, and finance. Given the size of the University's research enterprise, redundancies and inefficient processes have developed across the institution. Emory's internal Business Process Improvement office conducted a current state assessment and recommended that the Emory develop a shared service model for Research Administration.

### **Solution**

The team was engaged to assist in developing the shared service center model, designing a plan to pilot the service centers, and creating an implementation plan to support the campus-wide rollout. Our services included change management and information technology components.

- Shared Service Center Model Development – Define service center roles and responsibilities; determine staff roles, skills needed, and job descriptions; develop standard operating procedures (SOPs); and develop performance agreements (between service centers and faculty/departments, and between service centers and central offices)
- Pilot Plan Development – Develop pilot roll-out, evaluate pilot success, and revise the service center model accordingly
- Campus-wide Implementation Plan Development – Develop tactical rollout plan, including staff changes and logistics
- Change Management – Vision and leadership alignment, stakeholder engagement, and communication; culture and organizational alignment; training; and adoption and promotion of ongoing success
- Information Technology – Support of the enhancement of the PeopleSoft Grants module, including project management, functional/technical support, and work plan execution

### **Value to client**

The service center model has been designed (including roles and responsibilities, SOPs, staffing and logistics, performance level agreements, job descriptions and training development), and the pilots are in the process of being implemented. To support the shared service center, the team developed service level agreements, designed the campus-wide rollout plan, and measured the success of the initial pilots. Emory has realized increases in the service level of the research administration life cycle. This model is now a mature operation and is ongoing. This project was delivered on time and on budget.

## General Methodology Overview

Not every project is the same; different needs require different application of our change framework and the urgency of an initiative, and the prioritization of activities will vary directly by what the causal event was that drove the initiative. Using our knowledge of GMU, we believe that we can help in your efforts to achieve your objectives. In each engagement, we use a proven methodology that represents an approach to long-term, sustainable improvement that aligns people, processes, and technology across an organization to realize its overall strategy. We use this standardized methodology to approach and deliver each aspect of consulting, from strategy through implementation, accelerating the delivery of sustainable benefits to our clients.

This brings focus on activities in five key stages for a transformation project: Assess, Design, Construct, Implement, and Operate & Review. This approach integrates, supplements, and enhances tools, methods, approaches, and knowledge. It also serves as a common platform for accommodating the tools and frameworks that our clients may be using. Our approach considers the interrelationships necessary to solve complex problems.

Specifically, the methodology will:

- Strategically address change management and business transformation
- Demand a focus on people for cultural adaptation, training and leveraging toolset
- Innovate, implement, and integrate technology within business processes, and overall business strategy
- Integrate continuous learning and transition planning throughout the project for the highest degree of sustainability of change possible

To further enhance the communication and coordination between stakeholders, PEC will work closely with GMU to facilitate a systematic approach for planning, monitoring, management, and coordinating each project. This collaboration will foster success through oversight, with a goal of reducing risks, managing costs, and achieving sustainable outcomes for each project, no matter the size.

Our work with higher education institutions has focused on the following four broad areas:

- Strategic Planning
- Growth Strategies
- Organizational and Operational Effectiveness

### Strategic Planning

Together, our teams and our advisors have conducted hundreds of strategic planning engagements that can be broadly classified into the following three categories:

- Comprehensive business planning and strategic planning engagements that begin with definition of mission, vision, and goals, culminate in the development of implementation plans and include all the following components. We have conducted several engagements of this kind for institutions of higher education, state and local agencies, and research institutions.
- Stakeholder facilitation and governance initiatives, where we work directly with system or university leadership, boards, and governance bodies to facilitate a common understanding of current strengths, weaknesses, threats, and opportunities and align on a path forward.
- Political and economic strategy, we help governments, universities, and private sector clients use rigorous and robust economic analysis to respond effectively to their multiple business and policy challenges and to inform their decisions around the optimal allocation of resources, investment, and growth strategy.
  - We have used economic multipliers to estimate the direct, indirect, and induced effects of university initiatives

- We have provided assistance to estimate cost-benefit analysis of university infrastructure projects
- We have helped universities identify socio-economic returns on investment on their projects and student policies

### **Growth Strategy**

We understand how to help universities grow through both traditional and non-traditional revenue streams while increasing efficiencies and better managing risk. In addition to prudent financial and operational management, we recognize that universities need to grow and adapt to changing market conditions to increase their relevance and impact.

- **New Program Development:** Identification of programs that address market demand/supply imbalances and are more tightly linked to labor markets
- **Online Strategies:** This includes programs best suited to online mode of delivery, niche programs that leverage institution's unique strengths/academic offering, facilitation of build vs. buy/partner decisions, governance and organizational structures, implementation plans, and support with execution of such plans.
- **Alternative Revenue Streams:** Identification of revenue streams that fit with the mission/values of the institution, in addition to tuition revenue from traditional students (e.g., continuing education/corporate training; pre-college programs; content licensing/knowledge IP; better campus space utilization through rentals; service fee analysis; etc.)

### **Operational Strategy**

We have the proven ability to implement financial transformation in complex, multi-school settings and have assisted universities with the following:

- **Responsibility-Centered Management (RCM):** Helping institutions move from treating schools/academic units as cost centers and toward "revenue and profit" centers; bringing revenue-generating decisions closer to schools; supporting academic units in change management efforts related to this transition; developing new governance/ oversight structures to fit new budgeting models; calculating cost per student or program to enable universities/academic units to utilize a data-driven approach to investment and resource allocation decisions, etc.
- **Institutional Financial Forecasting:** Helping institutions develop robust strategic planning processes, including a robust analytic approach; creation of comprehensive financial models, including forecasts of key revenue and cost assumptions; training of key personnel on models and processes; etc.
- **Finance, HR, and Operations Assessments:** Determine how functions such as Finance, HR, and Operations perform relative to external benchmarks and relative to internal stakeholder needs.
- **Cost Reduction:** Leveraging organizational assessments to identify where cost savings could be executed; development of implementation plans to execute savings.
- **Performance Improvements:** Leveraging organizational assessments to identify how performance could be improved within a given functional area, often within the constraint of maintaining or even reducing overall spending in each functional area.

## **Performance Improvement**

### **Our Robust Capabilities – Performance Improvement**

Finance is the core of our offerings. Our practice professionals help clients assess, improve, and transform their finance functions. We provide insights and recommendations on sustainable performance improvement across the finance function, including people, processes, and systems, to support efficient alignment with organizational strategic objectives and operational requirements. Our services are designed to help improve the

performance of clients’ finance organizations and their businesses. We help organizations achieve strategic alignment of their finance organization, implement service and cost-improvement initiatives, and embed a performance management process and culture that unites the business around its core objectives. Our core service offerings include:

- Finance Process: PEC assists the client in the assessment, design, and implementation support for sustainable improvement in the finance function, processes, and associated controls. These projects can be process focused, or span across the entire organization.
- Organizational Design and Operating Model: PEC assists clients in designing and implementing responsive, cost-effective organization structures and aligning governance, processes, and performance measures to create an effective finance organization capable of executing the business strategy. As part of Operating Model Design, we assist clients in designing a holistic operating model that can help organizations transform their capabilities to drive value across the enterprise and integrity of the processes and information delivered to key stakeholders
  - Shared Services: PEC assists clients in the development and implementation of enterprise-level shared services strategy across business units, segments, or entire organizations. Our approach focuses on Shared Services Strategy and direction, processes, people and organizational change, technology enablement, location identification and facilities setup.
- Research Financial Statement Close Process: We advise on specific improvements to the research financial close process. This creates value by improving the transparency, accuracy, timeliness, and reliability of research information
- Organization Assessment: We work with you on the strategic drivers of value and help you and other members of your team to better understand and drive performance through organization planning, budgeting, forecasting, and performance reporting
- Finance Function Strategy: Finance function strategy aims to address the highest priorities and challenges of the client’s Chief Financial Officer (CFO). In recent years, the role of the CFO has changed significantly. Today’s CFOs are playing the role of “strategic partner” to the business. In addition to the traditional tasks, they actively get involved in decision support, risk, performance management, operational improvements, capital optimization and stakeholders’ management.

**Restructuring**

A deeper capability among performance improvement is our dedicated practice for restructuring. In our restructuring work, we typically assess the budget of the organization and each department, and deep dive into departmental operations, including processes, protocols, workflow, roles and responsibilities, and services being provided. We identify initiatives to improve operations, which enhance revenues or reduced costs. These initiatives could include new or improved rates or fees, asset monetization opportunities, headcount reductions, alternative service delivery models (e.g., shared services, outsourcing, co-sourcing, etc.) throughout university

departments. We could work with GMU to understand how to solve a complex financial problem present at one or more of its departments or campuses.

We would like to highlight a few capabilities with people and organizational change below:

- Change strategy — we help you to build a clear and concise vision of your future and deliver on it.
- Creating an architecture that supports the desired organization outcomes — we help you deal with change in a structured and coherent manner that prioritizes change. We do this by focusing on three or four areas that will have the biggest impact on your organization.
- Successful change requires leaders who are mobilized and energized to drive change at all levels in the organization.
- Team development — we develop the capabilities of the people in your organization so that they can deliver effectively as a team.
- Organizational design — we put in place the structure, roles, and capabilities your organization will need to deliver on your vision and agree what needs to happen to achieve your strategic goals.
- Embedding culture and behavioral change — we help you define and implement the most appropriate culture for delivering change to your organization.
- Extensive experience with change management, built from repeated successful project implementations. Over the course of dozens of engagements with our clients, we have developed extensive expertise in designing and facilitating change management strategies because virtually all higher education engagements involve a diverse group of stakeholders who often have diverging agendas. That is why we engage directly with senior leadership from the start, to understand where they are coming from and what their priorities and their perceived constraints are, because effective strategies consider a system's communication style, needs, and concerns.

We would like to highlight a few capabilities within risk and compliance below:

Our higher education experience well positions PEC to partner with GMU to ensure that the university is effectively allocating its governance, risk, control, and internal audit resources to address the risks associated to research that are most critical to GMU as a large, diverse public university system.

Specific experience in internal audit and risk management at the university level includes:

- Endowment risk assessment and compliance with university investment policies
- Research grant fiscal, operational and reporting compliance
- Laboratory safety assessment
